WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Rip a strip 1,074 x 52.5 mm from 12 mm exterior plywood.
Mark the low end (toward the outlets) and the high end (feed).
Pivot hole 10.5 mm: 25 mm from the low end, 10 mm up from the bottom edge. Prop hinge hole 10.5 mm: 67 mm from the high end, 10 mm up. Drill square to the face.
Prop block: 45 x 45 mm timber 120 mm long, glued (exterior PU) and screwed (4 x 40 mm, 4 screws) to the outside face, 7 mm from the high end, its bottom 12 mm below the wall (over the base ring).
Drill the prop hinge hole on through the block.
Fit: the end walls sit between the side walls; glue and three 4 x 40 mm screws per corner through the side wall into the end wall.
Seal all edges with exterior paint before assembly.
Check: both walls the same length within 1 mm; holes mirror-imaged.
