WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Rip a strip 1,050 x 52.5 mm from 12 mm exterior plywood.
Five feed openings, one per wick strip, 33 mm tall from the bottom edge. From the centre line, the same each side (mm): middle opening 89 each side of centre; others 106 to 283; 300 to 481.
Drill a 10 mm hole in each top corner of an opening, cut down to the bottom edge with a jigsaw, file square.
The posts left between openings are about 17 mm wide, on the rib lines; handle the wall flat until it is in the frame.
Cut the stone wool liner for this wall with the same openings.
Fit: between the side walls, its bottom edge on the base ring.
The wick tails pass out through the openings to the trough.
Check: openings line up with the wick strip positions.
