WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Four strips of 12 mm plywood, laid flat under the walls:
two side strips 1,062 x 52 mm (flush with the outside of the side
walls and the high wall, stopping at the low wall's inside face);
high strip 52 x 970 mm; low strip 40 x 970 mm, between the sides.
High strip: four 4 mm wide slots 5 mm deep cut down from its top face,
1.5 mm clear either side of each lip tab of the bottom plate (at the rib
lines, from the centre line: 97.2 and 291.6 mm each side).
Each strip reaches 15 mm past the liner into the aperture: this
ledge carries the edges of the bottom plate and the side rails.
The low wall comb stands outside the low strip, its sill level with it.
Fit: glue (exterior PU) and screw up into the wall bottom edges,
4 x 40 mm screws every 150 mm, pilot drilled 2.5 mm.
Check: the inner ledge edges form a 970 mm square within 1 mm
and lie flat (no step over 0.5 mm at the joints).
