WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Five strips per stage: 171, 167, 167, 167 and 171 mm wide.
Cut from a 1.0 x 1.4 m piece; the views show the part that lies under the plate, from the high wall's outside face to the brine tail.
Low end: follow the plate's zigzag 13 mm inside it (10 mm dry break), then a 30 mm wide tail along the middle of the brine tongue, as long as the tongue (plus 10 mm).
High end: leave 150 mm extra beyond the plate's high edge for the feed tail (out through the opening, up the wall, into the trough).
Hold it under the plate with two aluminium clips and no adhesive: a high-end clip (SSK-DWG-119) at the plate's high edge and a tongue clip over the brine tongue and the tail (SSK-DWG-120).
The strip edges stay 10 mm from the ribs and rails (dry breaks).
Check: no fibre bridges a dry break; tail centred on its tongue.

STILLSTACK
